Abstract (en)
[origin: EP1977658A1] The bracelet is formed of a set of interlocking links (4, 5) which are assembled such that one link is separated from other, where the link is assembled with other link by a transverse assembly pin (8). The former link is associated with a locking device (10) to lock the pin in the transverse position of the pin in the bracelet. The device includes a locking element (12) arranged in one link to rotate about the axis of rotation of the element, where the element has a non cylindrical portion which remains opposite the pin without penetrating a recess when the element is in an angular position.
