Abstract (en)
[origin: EP1977869A1] The stationary machine has a holding device (2) in the form of console arrangement for holding plate shaped work pieces (1). A connecting unit is guided along the respective plate shaped workpiece for introducing, applying and pressing of edge materials (12) at the respective plate shaped work piece. A stationary cartridge magazine (13) is arranged at the machine for providing a number of cartridges (14). A delivery device and the cartridges are provided to the cartridge magazine and are docked directly at the connecting unit for removing edge material.
