Abstract (en)
[origin: EP1978190A2] The cylinder has cores (2, 3) rotatable in a housing (1). The cores have a pin bolt (4) for selectively, blocking, releasing or moving the cores. A locking channel (5) is arranged in the cores for insertion of a key (6) to move a coupling sleeve (8). The sleeve has a form-fit recess for producing a form-closure with the key. The recess and an opening aligned with the recess are arranged exclusively at a circumferential area of the cores. The recess is accessible exclusively by the opening of the cores in a position when the sleeve is moved exclusively towards a locking burr (7).
