Abstract (en)

[origin: DE102006005488A1] The applicator (1) is designed as a cylindrical cap (5) with an inner thread to be joined to a bottle (3) containing a hair dyeing substance or any other cosmetic fluid. The upper surface of the cap is provided with a multitude of concentrically arranged conical nozzles (7) for a precise distribution of the substance on the scalp of the user or customer. The distribution area is surrounded by more rigid conical projections (11) with rounded tops (12) creating an appropriate distance between the application surface and the skin.
