Abstract (en)

[origin: WO2007085735A1] This mould is of the type comprising a moulding cavity (10), and at least one panel (16, 18, 20) for separating the cavity into at least two moulding compartments (24, 26), said panel being able to move between a position for separating the two compartments (24, 26), and an inoperative position, through an opening (22) made in a wall (12) of the cavity (10). According to one aspect of the invention, it comprises at least one shutter (32, 34) which can move between an open position, in which the shutter (32, 34) is released from the opening (22), and a closed position, in which the shutter (32, 34) closes at least one region of the opening (22). The invention can be applied to moulds for the production of interior trim elements for motor vehicles.
