Abstract (en)

[origin: DE102006003765A1] The ink-jet printer comprises a printing head (12) and an imaging head (13), both transversally moving across the sheet. The light hardened ink is distributed onto the sheet by the printing head (12) while being exposed to the radiation from the imaging head (13). The ink is exposed to the radiation a second time while both heads (12,13) are returned to their prior position. The sheet is moved in a right angle to the motion of the printing head (12) in a last step.
