Abstract (en)
[origin: WO2007085030A1] Elongate punching device (1) having a pin-shaped base part (2) which has two ends (2', 2'') lying opposite one another and on one end (2') of which is arranged a stamping roller (3) which is mounted rotatably on a rotational axle (10) and for the receiving of which in a transport position a covering cap (4, 4') which can be fastened on the base part (2) is provided, wherein, on the opposite end (2'') of the base part (2), a further ink application device (7, 15) is provided, for the receiving of which in a transport position a further covering cap (8, 81) which can be fastened on the base part (2) is provided, and the cross section of the base part (2) is substantially rectangular or elliptical and the rotational axle (10) of the stamping roller (3) extends parallel to the longer of the two cross-sectional axes (18', 18'').
