Abstract (en)
[origin: WO2007088023A1] A fuel tank (10) for a motor vehicle comprising a filler connection (12) enclosing a tank refueling passage (12) and operational and tank refueling venting conduits which are connected to a filler head (14) of the filler connection, wherein the filler head has at least one change-over switching valve (28) which in a first switching position (tank refueling position) opens a flow path from the tank refueling venting conduit to a venting passage, upstream of which a fuel vapor treating device is preferably connected, and closes a connection of the operational venting conduit to the tank refueling passage, and which in a second switching position (operational position) opens the connection of the operational venting conduit to the tank refueling passage and closes the flow path from the tank refueling venting conduit to the venting passage.
