Abstract (en)
[origin: DE102006003067A1] The method involves accessing of communication users, for which a cyclic time-frame is predetermined by occasionally firmer time duration, where time slots in time-frame are assigned to the communication users. The unused time slots are shortened in their duration, where additional time slot in that time frame can be placed. The time slots are assigned to communication users dynamically in particular in dependence of their communication needs. Independent claims are also included for the following: (1) use of method (2) system for dynamic resources assignment in a communication system.
