Abstract (en)
[origin: US2007175920A1] To provide a pouch for storing granules which can smoothly pour out the granular content even when filled with various granules. A pouch for storing granules where the perimeter of a front and back pair of synthetic resin film are sealed, wherein: a pouring spout with an easily opened port is formed to protrude out from the top perimeter region of the pouch, and opening support member is placed at the pour spout, and the front and back pair of synthetic resin film are prevented from mutually contacting by the opening support member in the region where the opening support member is established and surrounding regions thereof, so that the opening of the pour spout is always maintained in an open condition.
