Abstract (en)
[origin: EP1816237A1] Method for coating substrates with metals or oxides uses a coating bath containing at least one component whose concentration changes during coating and which is added or removed as required. This is carried out in relation to variations in the density of the bath. Independent claims are included for: (A) apparatus for adding or removing components from the coating bath comprising tanks (1A - 1F) of bath components which are fitted with pumps, a control unit (3) using sensors (4) to determine the density of the electrolyte; and (B) use of the apparatus for carrying out the method.
