Abstract (en)

[origin: US2010126233A1] The subject of the invention is a fully electronic grey water reusing washing machine recycling the greywater produced in the household for toilet flushing, which replaces the mechanical technical solution using mechanically moving parts as floating buoys (6, B6) provided with actuating shafts (15, B15) as its immediate antecedent forerunner by a completely electronically functioning technical solution, wherein the ECU of the washing machine carries out the tasks of storing, treating and feeding the greywater to flush the toilet by commanding electronic water valves (B4, D4, 7, B8) on basis of the signals received from the electronic water sensors (S1, S2, S3, Sn/F1, F2, F3, . . . Fn) mounted in the greywater and freshwater tanks respectively, while using one single greywater tank on the washer.
