Abstract (en)

[origin: WO2007088115A1] A process for non-uniform dyeing of textile products, comprising following stages: - arranging the textile products to be dyed in a chamber together with a plurality of permeable and absorbent granules impregnated with an inertizing liquid substance for rendering the textile to be dyed at least partially inert to dyeing; - bringing the textile products to be dyed into contact with the granules, the granules and the textile products being moved together in a relatively random way, for a sufficient amount of time to wet parts of the textile of the textile products with the inertizing substance; then - separating the textile products from the granules; - bringing the textile products to a temperature and for a sufficient amount of a time to cause the inertizing substance to react with the parts of the textile which were dampened with the substance; and finally - dyeing the textile products.
