Abstract (en)

[origin: DE102006002738A1] The control system is for the fuel injector (100) at an internal combustion motor. A first (AD) and/or second (AE) signal measures a given fuel volume at a particular point in time. The signals are correction by a correction value (KD,KE), which is adapted from at least one information value from at least one zero balancing process.
