Abstract (en)

[origin: DE102006027207A1] The light has a box-shaped light housing (2) for accommodation of a gas discharge lamp (3) and reflectors (4) arranged adjacent to the light source. The housing forms a light discharge opening that is enclosed by a light discharge unit (5). The light discharge unit has a light radiating characteristic in a radiation area (A) provided before the lamp, and a different light radiating characteristic that is opposite to the light radiating characteristic in a radiation area (B) that is separated from the radiation area (A).
