Abstract (en)

[origin: US7913165B2] A system and method configured to support inserting at least one object in a text editor comprises a text editor module, a text rasterizer module, at least one object to be inserted, and a separate object interpreter module. The text editor module is unable to insert an object directly and is configured to support UNICODE and scalable fonts. The text editor module comprises a first set of UNICODE numerical values and a second set of UNICODE numerical values. The text rasterizer module is associated with the text editor module and is configured to use at least one of the first set of numerical values to generate text to display in a display area. The user selected object to be inserted is associated with the second set of numerical values usable by the text editor. The separate object interpreter module is configured to receive the second set of numerical values and insert the object into the display area.
