Abstract (en)

[origin: FR2896905A1] The device has a mechanical device (5) formed by a vertical axle (50) axially guided along a vertical direction (XX') in a case. The device (5) has a pawl (9) above an upper wall of a horizontal crosspiece of a frame. The pawl gear meshes with a mobile unit e.g. fascia, and a drum (10) that is integrated with fingers placed inside the case. The pawl cooperates with the axle and a cam (70) of a driving module (7). The axle is integrated to one of the ends of a circular plate (51) and has V-shaped tooth (52) cooperating with complimentary shaped recesses provided in a base.
