Abstract (en)

The invention provides a personal ornament capable of reliably retaining the personal ornament with strong magnetic attraction force of metallic magnets (13, 14, 15). The magnetic attraction force is not less than a predetermined value, and hence it enhances safety against theft, and is excellent in wearing and removing by a wearer (33). The personal ornament comprises a string-shaped tube (12) made of a flexible material and capable of being twisted and bent, a plurality of columnar metallic magnets (13, 14, 15) inserted into the string-shaped tube (12), and an outer covering (25) provided on an outer peripheral surface of the string-shaped tube (12). Alternatively, the personal ornament comprises a personal ornament body (24) formed by inserting a plurality of columnar metallic magnets (13, 14, 15) into a string-shaped tube (12), and a retainer (271) capable of fixing one end side (561) and the other end side (562) of the personal ornament body (24) in a state where both end sides (561, 562) are aligned in parallel with each other.
