Abstract (en)
[origin: EP1980330A2] The spray gun for spraying liquids, especially paints, has an operating unit (7,8,9) on the housing (11) and/or handle (10) for engaging and disengaging a compressed air generator (2) and/or controlling its output. The switching or controlling information extracted from the operating unit is fed via a transmission facility (5) to the control elements (18,19) associated with the pressure generator, as a result of which the pressure generator can be engaged or disengaged, and its output controlled or regulated.
