Abstract (en)

[origin: EP1980395A2] The printer has a re-printer with a first molded half with a first arrangement for partially holding the wire (16), a second molded half with a groove facing the first arrangement and a heating arrangement and an arrangement for moving the two molded halves (4,5) relative to each other so that an intermediate carrier (7) is applied to the wire surface under heating to transfer the identifier to the wire surface.
