Abstract (en)

[origin: EP1980689A1] The vehicle has a support unit and a fixation unit supporting and fixing a threshing machine (M), and a stop mechanism (60) cooperated with a threshed post to position the vehicle and the machine with respect to the threshed post. The threshing machine is placed in a correct position for threshing another post. The mechanism includes a mobile stop moved between an active position and a feathered pitch position. The active position laterally protrudes with respect to the vehicle, and is in contact with the threshed post, and pitch position is relieved from the threshed post.
