Abstract (en)
[origin: EP1980708A1] An inclination compensator device for lifting platforms comprises: an anchoring portion (2), which can be stably connected to a fixed structure; a supporting portion (3), connected to the anchoring portion (2) and able to move relative to it so as to adopt a plurality of different operating positions. The supporting portion (3) can be operatively connected to a portion of the lifting platform (100) to form an adjustable support for the portion of the lifting platform (100). The device (1) also comprises locking means (11), acting between the supporting portion (3) and the anchoring portion (2) to stably hold them in a plurality of different positions relative to each other.
