Abstract (en)

Method for simultaneous handling and loading of drilling rods and casings by means of a machine equipped with two independent rotaries (1 and 2), slidably mounted, independent of one another, on the mast (9) of the machine; there being positionable alongside the mast (9) the loader (3) for loading rods (7) and casings (8), there being applied on the mast (9), at the bottom end, three vices (4, 5 and 6), designed for unscrewing/screwing the rods (7) and casings (8); the method is characterized by the following operations carried out in succession: a) operation of loading the rods/casings to carry out drilling in the earth down to the desired depth; b) operation of extraction of the battery of the rods, including the starting rod provided with the bit, and the casings that contain them, setting them resting in the loader, this operation being carried out in the following steps, namely: the first step b1) of extraction and arrangement of the rods (7) in the loader, and the second step b2) of extraction and arrangement of the casings (8) in the loader.
