Abstract (en)

[origin: FR2911864A1] The apparatus has multiple secured storage units for storing data relative to commercial transaction i.e. quantity of fuel, delivered to customer, where the data is displayed on a display. The storage units are associated to a visualization unit to permit a redisplay of the data relative to the commercial transaction on the display in response to a request and to print the data on a support such as received ticket. The visualization unit is integrated to the apparatus, and is actuated by a manual or physical actuating unit e.g. push button.
