Abstract (en)
[origin: WO2007079774A1] A greenhouse as subject of the present invention comprises a floor surface and a building structure. The floor structure and said building structure delimit an inner space. The building structure comprising at least one light-transmitting architectural element, which light transmitting architectural element is a double layered element comprising an outer layer of light-transmitting material and an inner layer of light-transmitting material. A void space is provided between the inner layer and the outer layer. The greenhouse comprises means for extracting air from the void space. The inner layer is a water vapour permeable but water impermeable membrane.
