Abstract (en)
[origin: WO2007087655A1] The invention relates to an arrangement for cooling the body of individuals (1) or the like, having cooling elements (2) which are connected to one another in a movable manner, contain a cooling liquid (3) and are arranged in the form of a cape or shawl (4) which can be worn by the individual (1) or the like who is to be cooled. In order to create such a cooling arrangement, which allows particularly rapid and efficient cooling of individuals (1) or the like, provision is made for the cooling elements (2) to contain within them a material, for example graphite, which is a good thermal conductor in relation to the cooling liquid (3) and is intended for absorbing the cooling liquid (3).
