Abstract (en)
[origin: WO2007090451A1] Fluid reservoirs which are based on polymer substrates and are capable of storing large amounts of fluids are described. The storage is reliable and the reemergence from the liquid reservoir is readily controllable, for example via the temperature or via mechanical actions. It is thus possible to achieve retardation of the fluid release. Also described are processes for producing such fluid reservoirs and also their use, for example in washing or cleaning compositions.
