Abstract (en)
[origin: WO2007085252A1] Electricity-producing awning consisting of or containing rigid or flexible solar cell material and possibly containing perforations allowing for passage through the awning of air but not sunbeams. The awning consists of tight or porous material or is supplied with openings that are formed so that they do not allow sunbeams to pass the lower shaded edges of the openings. The invention also includes new types of consoles for stable support of the awning.
