Abstract (en)

[origin: WO2007090576A1] Described is a camera arrangement with a camera aimed at a pane, wherein a light-guiding element is arranged between camera lens and pane and wherein the light-guiding element guides at least light which is incident on the pane in a grazing manner from a direction of incidence to the camera. In a particularly advantageous embodiment, the pane is designed as a single piece with the light-guiding element. The light-guiding element thereby also simultaneously fulfils the function of the screen of separating an inner and outer region.
