Abstract (en)

[origin: EP1818734A1] The device has a control lever (16) mounted on a lateral surface of a middle (1) of a watch case and articulated around an axis (16a) perpendicular to a plane of a central opening (1a) that receives a clockwork movement. The lever is situated at a distance from control buttons (4, 5) which are in kinematic coupling with the lever between two limited positions and are mounted slidingly inside two lateral openings.
