Abstract (en)

[origin: EP1982684A2] The unit has a roller i.e. solid cylinder, extending along a main elongation axis, and massage elements supported on a cutaneous surface. The elements comprise free ends projected with respect to the roller and arranged along a helix around the main axis of the roller. The elements are distributed along a spire (S1). The helix presents truncated portions (140b, 140d, 140f) with respect to the roller. The truncated portions are angularly moved with respect to each other along the main axis. An independent claim is also included for a method for non therapeutic cosmetic treatment.
