Abstract (en)
[origin: EP1982797A2] The tool (21) has a drive shaft (22) with a stem, which extends along a longitudinal axis (31), and another drive shaft (32), which is co-axial to the former drive shaft. A coupling unit (38) transfers torque from the former drive shaft to the latter drive shaft, and is detachable by axial pressure, where the coupling unit is arranged in an area, which is at a distance to an end of the latter drive shaft. A stop plate (41) is supported at the latter drive shaft, and a positioning device (46) pre-adjusts the axial distance of the stop plate to another end of the latter drive shaft.
