Abstract (en)

[origin: EP1983087A2] The method involves washing cloth pieces in a treatment liquid i.e. washing water, containing washing-active substances. The treatment liquid is partially separated from treated cloth pieces. The washing-active substances used in the treatment liquid separating the cloth pieces are removed to a larger extent according to different treatment steps. The washing-active substances are removed to a larger extent during rinsing of the cloth pieces in a drainage device. The washing-active substances are separated from the treatment liquid by precision filtration. An independent claim is also included for a device for wet-treatment washing of a cloth piece.
