Abstract (en)  
[origin: EP1852540A1] The invention relates to a method of drying textiles in a dryer, wherein the drying sequence includes the supply of at least one additive to the textiles. According to the invention at least one additive supply parameter is modified in dependency of a program selection and/or textile characteristic. Also a dryer is provided comprising a control unit adapted to control a plurality of program sequences and/or program options of the sequence and a supply unit adapted to supply at least one additive to the textiles to be dried in the dryer. According to the invention the control unit is adapted to control the supply unit in dependency of the at least one selected program sequence and/or a signal transmitted to the control unit by a weight detector (12) and/or humidity sensor (14).
