Abstract (en)  
[origin: EP1983118A2] According to the invention we are going to construct a movable extensible tunnel like extraction system constituted by an extraction wall joint to a sliding sectors covering, able to contain the overall size when the sectors are superimposed and to have efficiency characteristics analogue to traditional extraction walls equipped by a not movable covering. The invention comprises also the possibility to move the system as a whole in a very simple and efficacious way when the covering is closed, due to special slits for the lifting fork of an elevator or similar.
