Abstract (en)  
The tape has lateral surfaces (3, 4) colored with a colorant such that coloring on the surfaces in a partially expanded functional state of the tape in a distance of a viewer from the surfaces appears as a continuous colored surface for a human eye. The tape is made of soft foam and partially reset after compression. The colorant is designed such that uniform resetting of the tape is ensured over a width of the tape after compression, where the colorant is acrylate dispersion, ethylene vinyl-acetate, poly vinyl acetate, polyurethane or silicate, paraffin-based wax, hydrosilicon and silicone. An independent claim is also included for a method for manufacturing a sealing tape.

Abstract (de)  
Das Dichtband aus weichem, nach Kompression rückstellfähigem Schaumstoff mit zwei Seitenflächen (3, 4) ist an mindestens einer der beiden Seitenflächen (3, 4) mit einem Färbemittel derart eingefärbt, dass die Einfärbung auf der Seitenfläche (3, 4) in einem teilexpandierten Funktionszustand des nach Kompression teilweise rückgestellten Dichtbands bei jedem beliebigen Abstand eines Betrachters von der Seitenfläche (3, 4) für ein menschliches Auge als eine geschlossene Farbfläche erscheint.
