Abstract (en)

A bottommost refrigerant path among a plurality of refrigerant paths provided in an indoor heat exchanger (5) is configured such that, in cooling operation, a refrigerant flows through heat transfer tubes (6) positioned on the upwind side and the downwind side of the indoor heat exchanger (5) in relation to air blown from an air blower (21) and the refrigerant exits from a heat transfer tube (6) which is positioned at the second bottommost level or a higher level and on the upwind side of the indoor heat exchanger (5).
