Abstract (en)

A driving device (20) includes an electro-mechanical transducer (441) having first and second end portions (441 a, 441 b) opposite to each other in an expansion/contraction direction, a static member (442) coupled to the first end portion of the electro-mechanical transducer, a vibration friction portion (443) coupled to the second end portion of the electro-mechanical transducer, and a rod-shaped moving portion (423) frictionally coupled to the vibration friction portion, whereby moving the moving portion (423) in the expansion/contraction direction of the electro-mechanical transducer. An outer sheath (30) is for covering the driving device (20). Attitude retaining means (443c, 321 a) retains an attitude of the driving device (20) with respect to the outer sheath (30).
