Abstract (en)
[origin: WO2007093690A1] The invention concerns a method for separating a fraction (14) containing a supercritical or subcritical solvent (18) and a constituent (16), the method including the following steps: diluting the fraction in a mixture comprising a constituent liquid phase (16) and a solvent gas phase; separating the liquid phase by coalescing the liquid phase with a liquid eliminator (12). The method enables the constituent and the solvent to be simply separated, thereby increasing the yield of the constituent and recycling the solvent. The invention also concerns a device for separating such a fraction.
