Abstract (en)

[origin: WO2007090663A1] The present invention relates to a straightening device for a metal strip, comprising a first straightening roller and a second straightening roller which are arranged with respect to one another such that the metal strip is guided, while being enveloped by it, over the first straightening roller and then, while being enveloped by it, over the second straightening roller. One of the straightening rollers (1) is arranged opposite to a printing roller (2), with which a one-sided deformation by compression of the metal strip (3) can be brought about. The invention also relates to a straightening method.
