Abstract (en)
[origin: EP1813385A1] The method involves providing a part holder (10) and an abrading tool (14) having a substrate (22), and an active part (23) fastened to the substrate. A part in hard material (12) e.g. watch strap link, is fixed to the part holder. A relative movement is made at the part and the tool so that a surface (16) is in contact with the part (23) on a portion of trajectory of the part (12) and the tool (14) for forming grooves parallel between them on the surface (16), where the part (23) has cluster forming patterns distributed regularly on the substrate.
