Abstract (en)

[origin: WO2006038824A1] The "Composition for elastic wall sealing of a precinct where there is air under pressure" refers to a composition of a pseudo-plastic non-Newtonian viscous fluid type that achieves the sealing of the elastic rubber wall of a precinct where there is air under pressure. Practically, the sealing is achieved instantaneously after the accidental breaking of the precinct. Such precincts may be: tubeless tires or with chamber for bicycles, motorbikes and motor vehicles of any type where the inside pressure is between 1 and 10 bars.
