Abstract (en)

[origin: WO2007093306A2] Apparatus for cleaning surfaces of impression cylinders with the aid of a cleaning cloth which is transported from a supply roll via a pressure bar (10) to a collecting shaft for contaminated cleaning cloth, and having a setting device (18, 52, 46) for advancing and retracting the pressure bar (10) in relation to the impression cylinder (14), for the advance of which a drive is provided which lies behind the pressure bar (10), characterized in that the pressure bar (10) is guided displaceably within a substantially U-shaped bar profile (12), in which at least one spring is supported which prestresses the pressure bar in the retracting direction.
