Abstract (en)
[origin: WO2007090695A2] The invention relates to a refrigeration device (1) comprising a body (3) and at least two receiving compartments that are configured in said body (3), each compartment being closed by a cover panel (4, 4', 4''). The uppermost panel (4, 4') of said two cover panels can be pivoted about an axis in front of the lower cover panel (4', 4''). The axis that is fixed on the body (3) at least in the vertical direction of the latter, extends along a plane that is in contact with the front face of the cover panels (4, 4', 4''), or in front of this plane.
