Abstract (en)

[origin: FR2895813A1] The method involves obtaining constraints defined between two documents of an electronic document group and recording the constraints, for a given group of documents and a given arborescence level. Sub-groups are built according to the obtained constraints and the characteristics of the group documents. An arborescence level corresponding to the built sub-groups is formed. A built sub-group is selected and the process is repeated to obtain an arborescence of the electronic document group. Independent claims are also included for the following: (1) a device for assisting building of an arborescence of an electronic document group (2) an electronic multimedia agenda including a unit for implementing an electronic document group arborescence building assisting method (3) a computer program having instructions for implementing an electronic document group arborescence building assisting method.
