Abstract (en)

[origin: WO2007090644A1] A circuit arrangement (1) for actuating an electrical load (13) comprises a first connection (2) and a second connection (3) for feeding a first control signal (S1) and a second control signal (S2), a first output (23) to which the electrical load (13) can be connected, a power source (9) which is connected to the first output (23), and a control device (5). The control device is connected to a first and second connection (2, 3) and comprises a programming circuit (6) and a triggering circuit (7) which are each connected at the output end to a control output of the power source (9).
