Abstract (en)

[origin: WO2007091975A2] The present invention relates to a central! server (A) for the establishment of a communication between several users (1 , 2), where a first user (1) may leave a first message (11) on the central! server (A) by means of a first terminal (12), where a second user (2) accesses the first message (11) on the central! server by means of a second terminal (21). The second user (2) responds to the first message (11) by leaving a second message (22) on the central server (A) by means of the second terminal (21), which second message (22) is accessible to the first user (1) by means of the first terminal (12). The present invention specifically teaches that the first and second terminal (12, 21) is able to communicate by means of circuit switched video telephone communication and that the central! server (A) is arranged to communicate by means of circuit switched video telephone communication, that the communication between the central! server (A) and respective user (1 , 2) is performed through a circuit switched video telephone call, and that the first and second messages (11 , 22) respectively are video messages recorded and stored by the central server (A).
