Abstract (en)

[origin: EP1985338A1] To provide a game device capable of enhancing excitement in relation to sound output corresponding to an action taken by a game character. An event history data recording unit (70b) records action history data about history of actions taken by one or more game characters during at least a given evaluation target period in a game. An evaluation value calculating unit (76a) calculates evaluation values of the respective actions sequentially taken by the one or more game characters during the evaluation target period, based on the action history data recorded by the action history data recording unit (70b). In particular, the evaluation value calculation unit (76a) calculates an evaluation value of at least one action, based on an action taken after that action has been taken. A sound output unit (78) outputs sound corresponding to at least one of the actions sequentially taken by the one or more game characters during an evaluation target period, selected based on a result of calculation by the evaluation value calculation unit (76a).
