Abstract (en)
    A dust collector of a vacuum cleaner is provided. The dust collector includes a dust container, a first press member, and a second press member.
    The dust container includes a dust storage part storing dust. The first press member is coupled to the dust container. The second press member is
    provided within the dust container and interacts with the first pressing member to decrease a volume of the dust stored in the dust storage part. The
    first press member bidirectionally rotates to compress dust at both sides of the second press member.
