Abstract (en)
[origin: EP1985378A2] The device (1) has de-aeration rollers (15, 16) that are rotatably supported in a housing (11) and equipped with a set of spikes (17). An electrical drive motor is attached to the rollers, where the roller (15) is provided with a common shaft. The motor is remotely-controlled by a control device over radio or infrared waves. The housing includes a three-point support and two housing parts that are articulately connected with each other by a pivot pin (14). A servomotor (24) is provided for pivoting one of the housing parts.
